

Community Center

As City Planners, our goal for our think-like project is to unite the Socs and greasers. We think that a community center will help them. It will help bring them together through activities can also give them college credit or give them something to put on their resumes when applying for jobs.

We will build the community center on an open lot to eliminate rumbles. They can do different activities inside the community center instead of fighting. Greasers and Socs can volunteer at the community center to earn college credit. If some greasers don't want to go to college, volunteering at the community center can be an activity put on a resume.

The money for this community center will be given by sponsors. People and families with low income can be members for free and stay members by having good behavior. Visitors and people with higher income who use the facilities and equipment can pay. Also, the activities will be run by volunteers who want credit.

We will have different activities and leisure rooms for the greasers and Socs to relax and hang out. This will help them get to know each other and maybe stop fighting. It will give them something else to do in their free time. Also, the classes and activities will be mixed, so the greasers and Socs will have to interact.

Because we know that a lot of the Socs and greasers like sports, we will have many different choices of activities for them. Sports at the center include;

- Basketball

- Baseball
- Football
- Soccer
- Swim Team
- Softball
- Street Hockey
- Ultimate Frisbee
- Water Polo

Overall, this community center will have many different activity choices, and will bring the Socs and greasers together
